

QuickSec Mobile VPN

Complete, easy to integrate VPN solution

QuickSec Mobile VPN Client for Android

AuthenTec's Mobile VPN Client for Android is a complete Mobile VPN solution that includes a fully functional reference GUI. It is a fully featured VPN client tailored specifically for Android phones and tablets which is based on AuthenTec's proven QuickSec technology.

This VPN client solution has been tested for interoperability with all major VPN gateways and comes with an easy customizable UI. This Mobile VPN client is like QuickSec shipped in source code to allow full control of customization and integration.

Key Features and Benefits

Easy Configurability

QuickSec VPN client for Android operates with a template-based configuration. A VPN gateway template includes all settings that are common for a particular gateway. This enables a corporate administrator to distribute a standard template with all parameters pre-configured for the corporate gateway. Users will only input the parameters that are not common for the gateway, such as user names and passwords or certificates.

Feature-rich VPN Client

AuthenTec's Mobile VPN Client for Android has critical additional features that put it miles beyond the built-in VPN client of Android 2.x. With a list of features including tunnel mode IPsec, Xauth, EAPbased authentication, and split tunneling, AuthenTec's Mobile VPN Client is robust enough for enterprise VPN access.

- Seamless interoperability with all major VPN Gateways
- Easily customizable to fit device vendor style guide

Supports all major VPN use cases:

- Full IKEv1 and IKEv2 support
- NAT-T, Mode Config, Xauth support
- Split tunnelling support
- Support for Wi-Fi and 3G connections
- Pre-shared secret and certificate based authentications
- L2TP support
- Multi-subnet support

Features:

- Integrated into hardware based security systems
- Finger print sensor integration for access control
- Full IPv4 and IPv6 support
- MOBIKE
